

Coordination and Incumbency Advantage in Multi-Party Systems - Evidence from French Elections

Kevin Dano, Francesco Ferlenga, Vincenzo Galasso, Caroline Le Pennec and Vincent Pons

November 2024

Overview

The replication package is organized as follows:

- data:

This folder is divided into four subfolders.

- raw: contains the original databases used for replication, from which all the subsequent databases are generated.
- intermediate: contains the intermediate databases, generated by the programs Master_prep_1.do, Master_prep_2.do and Master_prep.ipynb.
- output: contains the databases used for analysis by the program Master_analysis.do.
- temp: temporary databases used within the same dofile; they can be deleted after replication.

- programs:

This folder contains all the programs used for replication.

- Master_prep_1.do: dofile that generates databases saved in data/intermediate.
- Master_prep.ipynb: Jupyter notebook that generates databases saved in data/intermediate.
- Master_prep_2.do: dofile that generates databases saved in data/intermediate and the final dababases saved in data/output.
- Master_analysis.do: dofile that generates the figures and tables saved in figures_tables/main_paper and figures_tables/appendix.
- dofiles: contains the programs called by the master dofiles.
- notebooks: contains the Jupyter notebooks called by the master notebook.

- figures_tables:

This folder is divided into two subfolders.

- main_paper: figures and tables included in the paper.
- appendix: figures and tables included in the Online Appendix.

Instructions for replicator

To replicate the results in the paper and the Online Appendix:

- Download and unzip the replication folder.
- Set the path to the folder location in the dofile programs/Master_analysis.do.
- Run the dofile Master_analysis.do.

If you wish to replicate the preparation of the raw databases, including the cleaning and merging of data coming from different sources and the construction of textual outcomes, follow these steps:

- Step 1: Set the path to the folder location and run the dofile programs/Master_prep_1.do.
- Step 2: Set the path to the folder location and run the Jupyter notebook programs/Master_prep.ipynb.
- Step 3: Set the path to the folder location and run the dofile programs/Master_prep_2.do.

Original databases, availability and provenance

The databases included in the data/raw folder are described below:

Subfolder	Data file	Description and source
elections	leg_database_redistrict.dta cant_database_redistrict.dta	Candidate-level information on electoral results with information on redistricting. These databases were not publicly available at the time of the analysis and were generously provided by Clémence Tricaud. See Granzier et al. (2023) for more information on the collection of these data.
elections	elections_depenses_cant_leg_bycandidates.dta	Candidate-level information on campaign revenue and expenses. This database was not publicly available at the time of the analysis and were generously provided by Clémence Tricaud. See Granzier et al. (2023) for more information on the collection of these data.

elections	cand_across_elections_s amedis.dta, cand_across_elections_s amedis_others.dta, dataset_cand_id_across_ elections.dta	Unique candidate identifier created by merging candidate names from one election to the next. These databases were not publicly available at the time of the analysis and were generously provided by Cl�mence Tricaud. See Granzier et al. (2023) for more information on the collection of these data.
elections	political_orientations_ wparty_all.dta	Manual classification of political labels between parties and coalitions performed by the authors. See Online Appendix D.2 for more information.
manifestos	df_raw_1962, ..., df_raw_2017	Textual content of candidate manifestos from Le Penec (2024) and Cag� et al. (2024).
manifestos	key_1962.csv, ..., key_2017.csv	Unique candidate identifier linked to candidate manifestos from Le Penec (2024) and Cag� et al. (2024).
manifestos	french_stopwords.txt	List of French stopwords prepared manually by the authors.

Computational requirements

Software Requirements

The dofiles were run on Stata 17MP. The following commands need to be installed:

- *ssc install reclink*
- *ssc install estout*
- *ssc install rdrobust*
- *net install rddensity,*
from(<https://raw.githubusercontent.com/rdpackages/rddensity/master/stata>)
replace
- *ssc install texsave*

To run the command *rdob*, it is required to save the ado file *rdob.ado* in the appropriate folder. To do so, the replicator can follow these steps:

1. Download the ado file *rdob.ado* from the following web page: <https://gsb-faculty.stanford.edu/guido-w-imbens/software/>
2. Run the command *sysdir* in Stata to identify the path to the BASE directory (e.g., *C:\Program Files\Stata17\ado\base*)
3. Save the file *rdob.ado* in this directory.

The Python scripts were run with Python version 3.8.5, on the Jupyter notebook environment version 6.1.4 and accessed through the Anaconda software distribution

(version 2.0.4). A requirements.txt file is provided in the main folder and includes all packages in the environment we used. In particular, we use the following packages:

- *pandas: 1.1.3*
- *numpy: 1.19.2*
- *scikit-learn: 0.23.2*
- *transformers: 4.5.1*
- *protobuf: 3.19.1*

The following packages and libraries need to be installed (using pip in the notebook directly or conda on the Anaconda Prompt):

- *!pip install protobuf / conda install -c anaconda protobuf*

We also use a pretrained part-of-speech tagging model for French language available here: <https://huggingface.co/gilf/french-camembert-postag-model>

Details on Computation Environment

All programs in the programs folder were last run in September 2024, on an Intel(R) Core(TM) i7-8565U CPU @ 1.80GHz 1.99 GHz Laptop with 16GB of ram and Windows 10.

The program Master_analysis.do took about 1 hour to run. In the paper, we report the results using 10,000 replications to compute bootstrap standard errors in Tables 4 and 5 as well as Appendix Tables A.4, A.11, A.13 and A.14. However, the code then takes several days to run. To ease replicability, we set the number of replications in the attached code to 10. The approximate time needed to run the entire code is determined based on this number of replications. The number of replications can be changed easily at the beginning of the dofile Master_analysis.do. The value of the bounds will remain unchanged whatever the number of replications, but the standard errors and significance stars may differ slightly.

The set of programs used for the preparation of the databases (described below) took about 48 hours to run.

Description of code

1/ The dofile Master_analysis.do runs programs in the programs/dofiles folder. They use as inputs the databases saved in data/output. Each of these programs is described below (in the order in which they are run):

Program	Description
program_bounds.do	Defines the function used to estimate bounds.
analysis_main.do	Generates the figures and tables shown in the paper.
analysis_appendix.do	Generates the figures and tables shown in the Online Appendix.

2/ The dofiles Master_prep_1.do, Master_prep_2.do and the Jupyter notebook Master_prep.ipynb run the programs in the programs/dofiles and programs/notebooks folders. Each of them is described below (in the order in which they are run):

Program	Description
dofiles/prep_elections.do	Cleans the electoral result databases.
dofiles/prep_manifestos.do	Merges electoral results with the candidate identifier from candidate manifestos.
notebooks/Prep_manifestos.ipynb	Cleans the textual content of candidate manifestos.
notebooks/Originaly.ipynb	Constructs several measures of text similarity to other candidates from the same party.
notebooks/Find_words.ipynb	Counts the number of personal pronouns and past participles in candidate manifestos.
dofiles/prep_database.do	Merges all intermediate dabatases, constructs treatment and outcome variables, saves the final databases used in the analysis.

Constructed databases

The preparation programs described above generate the following databases, which are saved in data/output and used by the dofiles analysis_main.do and analysis_appendix.do.

Data file	Description
database_win.dta	Database for the analysis of the effect of winning an election.
database_runoff.dta	Database for the analysis of the effect of qualifying for the runoff.
database_all.dta	Database for additional analyses.

Description of results

The figures and tables included in the paper are listed below, along with their origin and their location:

Object	Created by	Location
Figure 1	programs/dofiles/analysis_main.do	figures_tables/main_paper/Figure1_indiv.png, Figure1_party.png, Figure1_orient.png
Figure 2	programs/dofiles/analysis_main.do	figures_tables/main_paper/Figure2_indiv.png, Figure2_party.png, Figure2_orient.png

Figure 3	programs/dofiles/analysis_main.do	figures_tables/main_paper/Figure3_indiv.png, Figure3_party.png, Figure3_orient_1.png, Figure3_orient_2.png
Figure 4	programs/dofiles/analysis_main.do	figures_tables/main_paper/Figure4_win.png, Figure4_run.png, Figure4_qualif.png, Figure4_orient.png
Table 1	programs/analysis/main_analysis.do	figures_tables/main_paper/Table1.tex
Table 2	programs/analysis/main_analysis.do	figures_tables/main_paper/Table2.tex
Table 3	programs/analysis/main_analysis.do	figures_tables/main_paper/Table3.tex
Table 4	programs/analysis/main_analysis.do	figures_tables/main_paper/Table4.tex
Table 5	programs/analysis/main_analysis.do	figures_tables/main_paper/Table5.tex
Table 6	programs/analysis/main_analysis.do	figures_tables/main_paper/Table6.tex
Table 7	programs/analysis/main_analysis.do	figures_tables/main_paper/Table7.tex

The figures and tables included in the Online Appendix are listed below, along with their origin and their location:

Object	Created by	Location of the source file
Figure A1	programs/analysis/analysis_appendix.do	figures_tables/appendix/FigureA1_indiv.png, FigureA1_party.png
Figure B1	programs/analysis/analysis_appendix.do	figures_tables/appendix/FigureB1_indiv.png, FigureB1_party.png, FigureB1_orient.png,
Figure B2	programs/analysis/analysis_appendix.do	figures_tables/appendix/FigureB2_win_indiv.png, FigureB2_run_indiv.png, FigureB2_win_party.png, FigureB2_run_party.png, FigureB2_win_orient.png, FigureB2_orient.png, FigureB2_orient_2.png
Figure B3	programs/analysis/analysis_appendix.do	figures_tables/appendix/FigureB3_indiv.png, FigureB3_party.png, FigureB3_orient.png
Figure B4	programs/analysis/analysis_appendix.do	figures_tables/appendix/FigureB4_indiv.png, FigureB4_party.png, FigureB4_orient.png

Figure C1	programs/analysis/analysis_app endix.do	figures_tables/appendix/FigureC1_indiv.png , FigureC1_party.png, FigureC1_orient.png
Figure C2	programs/analysis/analysis_app endix.do	figures_tables/appendix/FigureC2_indiv.png , FigureC2_party.png, FigureC2_orient.png
Figure D1	PDF downloaded from Internet Archive in 2020.	figures_tables/appendix /Figure_manif1.png, Figure_manif2.png
Table A1	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA1.tex

Table A3	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA3.tex
Table A4	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA4.tex
Table A5	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA5.tex
Table A6	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA6.tex
Table A7	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA7.tex
Table A8	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA8.tex
Table A9	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA9.tex
Table A10	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA10.tex
Table A11	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableA11.tex
Table A12	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableA12a.tex, TableA12b.tex
Table A13	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableA13a.tex, TableA13b.tex
Table A14	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableA14
Table B1	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableB1a.tex, TableB1b.tex
Table B2	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableB2.tex
Table C1	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableC1a.tex, TableC1b.tex, TableC1c.tex

Table C2	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableC2.tex
Table C3	programs/analysis/analysis_app endix.do	figures_tables/appendix / TableC3a.tex, TableC3b.tex, TableC3c.tex, TableC3d.tex
Table D1	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableD1.tex
Table D2	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableD2.tex
Table D3	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableD3.tex
Table D4	programs/analysis/analysis_app endix.do	figures_tables/appendix /TableD4.tex
Table D5	Constructed manually as explained in Appendix D.2.	figures_tables/appendix/partytabs

Note: for all tables using the `rdrobust` command, the significance stars shown in the paper have been added manually. Therefore, the visual aspect of the tables produced by the dofile `Master_analysis.do` is not exactly the same as those shown in the paper.

Contact

If you have any question regarding this replication package, please contact Caroline Le Pennec by email: caroline.le-pennec@hec.ca.
